

Currently in the Gulf of Mexico, a production structure and platform rig showing LQT's quarters modules housing the overflow of personnel from the rig. The uniqueness of these modules is that they are aluminum, and overbuilt with enough strength to be stacked several units high. There are five modules on the permanent heliport, still offering a landing area for helo service via their incorporated helideck. Also six ancillary LQT modules are stacked alongside and between the permanent quarters building and the rig.
